European Technical Assessment

ETA-05/0255

English translation prepared by DIBt

Page 2 of 20 | 19 January 2016

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The Hilti HVU is a bonded anchor consisting of a mortar capsule Hilti HVU and a steel element. The steel element consist of

- an anchor rod Hilti HAS-(E) with washer and hexagon nut of sizes M8 to M30 or
- an internally threaded sleeve HIS-(R)N of sizes M8 to M20

The mortar capsule is placed in the hole and the steel element is driven by machine with simultaneous hammering and turning.

The anchor rod is anchored via the bond between steel element, chemical mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values under static and quasi-static action, Displacements	See Annex C 1 to C 6

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 19 January 2016 by Deutsches Institut für Bautechnik

Table A1: Materials

Designation	Material
Metal parts made of zinc coated steel	
HAS-(E) (F) M8 to M24	Strength class 5.8, $f_{uk} = 500 \text{ N/mm}^2$, $f_{yk} = 400 \text{ N/mm}^2$ Elongation at fracture ($l_0=5d$) > 8% ductile Electroplated zinc coated $\geq 5 \mu\text{m}$, (F) hot dip galvanized $\geq 45 \mu\text{m}$
HAS-(E) (F) M8 to M30	Strength class 8.8, $f_{uk} = 800 \text{ N/mm}^2$, $f_{yk} = 640 \text{ N/mm}^2$ Elongation at fracture ($l_0=5d$) > 8% ductile Electroplated zinc coated $\geq 5 \mu\text{m}$, (F) hot dip galvanized $\geq 45 \mu\text{m}$
Internally threaded sleeve HIS-N	Electroplated zinc coated $\geq 5 \mu\text{m}$
Washer	Electroplated zinc coated $\geq 5 \mu\text{m}$, hot dip galvanized $\geq 45 \mu\text{m}$
Nut	Strength class of nut adapted to strength class of threaded rod Electroplated zinc coated $\geq 5 \mu\text{m}$, hot dip galvanized $\geq 45 \mu\text{m}$
Metal parts made of stainless steel	
HAS-(E)R	For $\leq \text{M24}$: strength class 70, $f_{uk} = 700 \text{ N/mm}^2$, $f_{yk} = 450 \text{ N/mm}^2$ For $> \text{M24}$: strength class 50, $f_{uk} = 500 \text{ N/mm}^2$, $f_{yk} = 210 \text{ N/mm}^2$ Elongation at fracture ($l_0=5d$) > 8% ductile Stainless steel 1.4401, 1.4404, 1.4578, 1.4571, 1.4439, 1.4362 EN 10088-1:2014
Internally threaded sleeve HIS-RN	Stainless steel 1.4401, 1.4571 EN 10088-1:2014
Washer	Stainless steel 1.4401, 1.4404, 1.4578, 1.4571, 1.4439, 1.4362 EN 10088-1:2014
Nut	Strength class of nut adapted to strength class of threaded rod Stainless steel 1.4401, 1.4404, 1.4578, 1.4571, 1.4439, 1.4362 EN 10088-1:2014
Metal parts made of high corrosion resistant steel	
HAS-(E)HCR	For $\leq \text{M20}$: $f_{uk} = 800 \text{ N/mm}^2$, $f_{yk} = 640 \text{ N/mm}^2$ For $> \text{M20}$: $f_{uk} = 700 \text{ N/mm}^2$, $f_{yk} = 400 \text{ N/mm}^2$, Elongation at fracture ($l_0=5d$) > 8% ductile High corrosion resistant steel 1.4529, 1.4565 EN 10088-1:2014
Washer	High corrosion resistant steel 1.4529, 1.4565 EN 10088-1:2014
Nut	Strength class of nut adapted to strength class of threaded rod High corrosion resistant steel 1.4529, 1.4565 EN 10088-1:2014

Hilti bonded anchor HVA, HVA R and HVA HCR

Product description
Materials

Annex A3

Specifications of intended use

Anchorage subject to:

- Static and quasi static loading

Base material:

- Reinforced or unreinforced normal weight concrete according to EN 206:2013.
- Strength classes C20/25 to C50/60 according to EN 206:2013.
- Non-cracked concrete.

Temperature in the base material:

- **at installation**
-5 °C to +40 °C
- **in-service**
Temperature range I: -40 °C to +40 °C
(max. long term temperature +24 °C and max. short term temperature +40 °C)
Temperature range II: -40 °C to +80 °C
(max. long term temperature +50 °C and max. short term temperature +80 °C)
Temperature range III: -40 °C to +120 °C
(max. long term temperature +72 °C and max. short term temperature +120 °C)

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
(zinc coated steel, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal conditions, if no particular aggressive conditions exist
(stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal conditions, if other particular aggressive conditions exist
(high corrosion resistant steel).
Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution
(e.g. in desulphurization plants or road tunnels where de-icing products are used).

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static loading are designed in accordance with:
"EOTA Technical Report TR 029, 09/2010" or "CEN/TS 1992-4:2009"

Installation:

- Use category: dry or wet concrete (not in flooded holes)
- Drilling technique: hammer drilling and hammer drilling with hollow drill bit TE-CD, TE-YD.
- Overhead installation is admissible.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

Hilti bonded anchor HVA, HVA R and HVA HCR

Cleaning alternatives

Manual Cleaning (MC):

Hilti hand pump for blowing out drill holes.

Compressed Air Cleaning (CAC):

Air nozzle with an orifice opening of minimum 3,5 mm in diameter.

Automatic Cleaning (AC):

Cleaning is performed during drilling with Hilti TE-CD and TE-YD drilling system including vacuum cleaner.

Hilti bonded anchor HVA, HVA R and HVA HCR

Intended Use

Installation parameters
Cleaning and setting tools

Annex B5

Installation instruction

Hole drilling

Hammer drilling

Drill hole to the required embedment depth with a hammer drill set in rotation-hammer mode using an appropriately sized carbide drill bit.

Drill hole to the required embedment depth with an appropriately sized Hilti TE-CD or TE-YD hollow drill bit with Hilti vacuum attachment. This drilling removes dust while drilling. After drilling is complete, proceed to the "check setting depth" step in the instructions for use.

Drill hole cleaning

Just before setting an anchor, the drill hole must be free of dust and debris. Inadequate hole cleaning = poor load values.

Manual Cleaning (MC)

The Hilti hand pump may be used for blowing out drill hole. Blow out at least 4 times from the back of the drill hole until return air stream is free of noticeable dust.

Compressed Air Cleaning (CAC)

Blow 2 times from the back of the hole (if needed with nozzle extension) over the hole length with oil-free compressed air (min. 6 bar at 6 m³/h) until return air stream is free of noticeable dust.

Check setting depth

Check the setting depth with the marked element. The hole depth should not exceed the anchor element embedment depth. If it is not possible to insert the element to the required embedment depth, drill deeper.

Hilti bonded anchor HVA, HVA R and HVA HCR

Intended Use
Installation instructions

Annex B6

Setting the element

Insert the foil pack into the hole in the orientation shown.

Chuck the setting tool into the hammer drill. Insert the anchor rod in the setting tool (Annex B4/B5). Using hammer-drill mode, drive the anchor rod through the foil pack (250 - 1000 RPM) Do not continue to operate the hammer drill after the reaching the bottom of the hole.

After required curing time t_{rel} (see Table B3) the screwed on setting tool can be removed.

After required curing time t_{cure} (see Table B3) apply installation torque T_{inst} given in Table B1 and B2.

The anchor can be loaded.

Hilti bonded anchor HVA, HVA R and HVA HCR

Characteristic steel resistance HIS-N with screw grade 8.8	$N_{Rk,s}$	[kN]	25	46	67	125	116	
Partial safety factor	$\gamma_{Ms,N}^{1)}$	[-]	1,5					
Characteristic steel resistance HIS-RN with with screw grade 70	$N_{Rk,s}$	[kN]	26	41	59	110	166	
Partial safety factor	$\gamma_{Ms,N}^{1)}$	[-]	1,87					2,4
Combined pullout and concrete failure								
Characteristic resistance in non-cracked concrete C20/25								
Temperature range I: 40 °C/24 °C	$N_{Rk,p,ucr}$	[kN]	25	40	60	95	140	
Temperature range II: 80 °C/50 °C	$N_{Rk,p,ucr}$	[kN]	20	35	50	75	95	
Temperature range III: 120 °C/72 °C	$N_{Rk,p,ucr}$	[kN]	9	16	20	40	50	
Factor acc. to section 6.2.2.3 of CEN/TS 1992-4:2009 part 5	$k_8 = k_{ucr}^{3)}$	[-]	10,1					
Increasing factors for τ_{Rk} in concrete	ψ_c	C30/37	1,12					
		C40/50	1,21					
		C50/60	1,28					
Splitting failure								
Edge distance $c_{cr,sp}$ [mm] for	$h / h_{ef} \geq 2,0$	$1,0 \cdot h_{ef}$						
	$2,0 > h / h_{ef} > 1,3$	$4,6 h_{ef} - 1,8 h$						
	$h / h_{ef} \leq 1,3$	$2,26 h_{ef}$						
Spacing	$s_{cr,sp}$	[mm]	$2 \cdot c_{cr,sp}$					

¹⁾ In absence of national regulations.

²⁾ Parameter for design according to EOTA Technical Report TR 029.

³⁾ Parameter for design according to CEN/TS 1992-4:2009.

Hilti bonded anchor HVA, HVA R and HVA HCR

Performances

Characteristic values of resistance under tension loading.

Design according to „EOTA Technical Report TR 029, 09/2010“ or “CEN/TS 1992-4:2009”

Annex C4

Table C6: Characteristic resistance for internal threaded sleeve HIS-N... under shear load in case of static and quasi static loading

HIS-(R)N			M8	M10	M12	M16	M20
Steel failure without lever arm							
Factor according to section 6.3.2.1 of CEN/TS 1992-4: 2009 part 5	$k_2^{3)}$	[-]	1,0				
Characteristic resistance HIS-N with screw grade 8.8	$V_{Rk,s}$	[kN]	13	23	34	63	58
Partial safety factor	$\gamma_{Ms,V}^{1)}$	[-]	1,25				
Characteristic resistance HIS-RN with screw grade 70	$V_{Rk,s}$	[kN]	13	20	30	55	83
Partial safety factor	$\gamma_{Ms,V}^{1)}$	[-]	1,56				2,0
Steel failure with lever arm							
Characteristic resistance HIS-N / screw strength class 8.8	$M_{Rk,s}$	[Nm]	30	60	105	266	519
Partial safety factor	$\gamma_{Ms,V}^{1)}$	[-]	1,25				
Characteristic resistance HIS-RN / screw strength class 70	$M_{Rk,s}$	[Nm]	26	52	92	233	454
Partial safety factor	$\gamma_{Ms,V}^{1)}$	[-]	1,56				
Concrete pry-out failure							
Factor acc. to equation (5.7) of TR 029 or acc. to equation (27) of CEN/TS 1992-4: 2009 part 5	$k^{2)} = k_3^{3)}$	[-]	2,0				
Concrete edge failure							
Effective length of anchor in shear loading	l_f	[mm]	90	110	125	170	205
Diameter of anchor	$d^{2)} = d_{nom}^{3)}$	[mm]	12,5	16,5	20,5	25,4	27,6
